EXECUTIVE SUMMARY

Full Stack Developer and Server Developer with hands-on, production experience building and supporting scalable MERN stack application end to end — from API design through deployment. Comfortable owning server-side responsibilities in Linux (Ubuntu) and Windows environments, and have delivered three live, production applications: the RHT Monitor Dashboard ([chaukas.in:4480](#)), the Freetrack multi-level tracking and admin platform ([freetrack.in](#)), and the company's official corporate website, Srishti Wireless Solution ([siwi.in](#)). Known for taking full ownership of assigned modules, writing clean and maintainable code, and collaborating closely with cross-functional teams to ship reliable software on schedule. Actively building expertise in agentic AI and LLM-integrated development — LangChain/LangGraph workflows, RAG pipelines, and MCP-based tool integration — to bring AI-powered features into full stack products. Looking to bring strong MERN fundamentals, real deployment experience, and emerging AI-integration skills to a team building high-impact products.

PROFESSIONAL EXPERIENCE

Srishti Wireless Solution

JULY 2025–PRESENT

Full Stack Developer · Server Developer

- Own end-to-end delivery of MERN stack applications, from requirement discussion and API design through frontend build and production deployment.
- Design and build RESTful APIs using Node.js and Express.js, backed by well-structured MongoDB schemas built for performance and scale.
- Manage server operations on Linux (Ubuntu), including environment configuration, hosting, uptime monitoring, and routine maintenance.
- Partner with designers, QA, and business stakeholders during code reviews and sprint planning to keep delivery aligned with project goals.
- Troubleshoot production issues across the stack, from API errors to deployment failures, and ship fixes with minimal downtime.

PROJECTS & KEY CONTRIBUTIONS

RHT Monitor Dashboard ([chaukas.in:4480](#))

Real-Time Temperature & Humidity Monitoring System — MERN Stack & Linux (Ubuntu)

- Built and deployed a real-time environmental monitoring dashboard tracking temperature and humidity readings from connected devices.
- Developed the Node.js and Express.js backend to ingest sensor data and expose RESTful APIs for live and historical readings.
- Designed MongoDB collections optimized for high-volume, time-based data, keeping queries fast as the dataset grows.
- Built a React front end presenting live values, historical trend charts, and threshold-based visual alerts.
- Configured and maintained the deployment on the company's Linux (Ubuntu) production server for round-the-clock uptime.

Freetrack ([freetrack.in](#))

Real-Time Tracking & Multi-Level Admin Management System — Full MERN Stack

- Built and deployed Freetrack, a real-time tracking system with an integrated multi-level admin structure (Super Admin, Admin, Sub-Admin).
- Implemented JWT-based authentication and role-based route protection on the Node.js and Express.js backend.
- Designed MongoDB schemas to store tracking records, complete status history, users, roles, and permissions.
- Developed REST APIs for creating, updating, and retrieving tracking entries across every access level.
- Built a responsive React front end giving end users a clear status timeline and each admin role a dedicated dashboard.

Srishti Wireless Solution — Official Website ([siwi.in](#))

Corporate Website — MERN Stack

- Built the company's official website, the primary online presence for services, ongoing projects, and contact information.
- Developed responsive React front end sections covering company overview, services, and inquiry forms.
- Built Node.js and Express.js APIs to handle contact form submissions and deliver structured content.
- Used MongoDB to store editable service and inquiry content, allowing updates without any code changes.
- Deployed and maintained the site on the company's production server, reflecting the company's branding.

EDUCATION

Bachelor of Computer Science

R.D. National College, Bandra, Mumbai

DURATION	SGPA (YEARLY)	FIELD OF STUDY
2022 – 2025	8.6 / 7.97 / 8.5	Computer Science

SKILLS

LANGUAGES: JavaScript (ES6+), TypeScript, Python

FRONTEND: React.js, Next.js, Redux, Tailwind CSS, Bootstrap, Material-UI (MUI)

BACKEND: Node.js, Express.js

DATABASE: MongoDB, PostgreSQL (basics), Schema & Data Modeling

AGENTIC AI & LLM INTEGRATION: LLM APIs (OpenAI, Claude, Gemini), LangChain, LangGraph, RAG, Vector Databases (Pinecone / Chroma), Prompt Engineering, MCP (Model Context Protocol)

API & CONCEPTS: RESTful APIs, JWT / OAuth Authentication & Authorization, Responsive Web Design, Cross-Browser Compatibility, Performance Optimization

DEVOPS & TOOLS: Git, GitHub, Docker, CI/CD basics, Postman, Linux (Ubuntu), AWS Fundamentals, Production Deployment

CORE COMPETENCIES

- ◆ Team Collaboration
- ◆ Ownership & Accountability
- ◆ Analytical & Critical Thinking
- ◆ Effective Communication
- ◆ Problem Solving
- ◆ Adaptability

RESEARCH & FOCUS PILLARS

- ◆ **Agentic AI & LLM-Integrated Apps**
Building agent workflows with LangChain/LangGraph, RAG pipelines, and MCP-based tool integration.
- ◆ **Distributed Systems**
Learning microservices concepts and high-availability server clusters.
- ◆ **Scalable Backend Development**
Building skills in high-traffic Node.js patterns and MongoDB performance tuning.
- ◆ **Real-Time & IoT Systems**
Exploring real-time data pipelines for sensor-based monitoring solutions.
